This is an overview of the changes made to the WAWF application for DR882, Cryptographic Application Programming Interface Component Object Model (CAPICOM) Replacement.

A Java Applet replaces the functionality of the CAPICOM ActiveX object. The Java Applet will be used for registration, logon, profile maintenance, and document signing.

This presentation contains audio narrative. Please adjust your volume accordingly.

The Java Applet works on all major browsers including 64 bit Internet Explorer running on a Windows Platform.

The major browsers include:

- Internet Explorer (IE) 7+
- Firefox
- Chrome
- Safari
- Opera

Click the Machine Setup link to see the updated instructions.

Help

Machine Setup

Step 5: Java Runtime Environment Installation (This step is only required for certificate users.)

Your Browser :  [Internet Explorer 8 \(32-bit\)](#)

Java Runtime Environment Version Installed : [1.6.0_29](#)

If you are running a 32-bit browser and have the 32-bit Java Runtime Environment Version 1.6.0.10 or higher installed (as shown above) then you may skip this step.

If you are running a 64-bit browser and have the 64-bit Java Runtime Environment Version 1.7.0.01 or higher installed (as shown above) then you may skip this step.

Note: If you are not permitted to install software on your computer, contact your network administrator or the person(s) who perform maintenance on your computer system to download and install the latest JRE (Java Runtime Environment).

The WAWF application uses digital certificates (also called Public Key Infrastructure (PKI) certificates) to identify users of the system and to sign documents in the system. Digital certificates are encrypted files containing private keys that are verified against a chain of trust that is known to the browser.

Note: Those users who will be using Digital software certificates or CAC cards to access WAWF MUST ensure that their certificates and/or cards are installed and properly working BEFORE completing this step.

The WAWF application uses a customized, signed, and sealed Java Applet to access certificates and sign documents. The Applet requires that a JRE be installed in order to run and will prompt the user for installation of the correct JRE if not installed.

For DoD users, this Applet works with your Common Access Card (CAC) middleware. The CAC middleware is the intermediary between an application like the Internet Explorer browser on your PC, your smart card reader, and the CAC. Middleware enables applications to use information that is stored on the integrated circuit chip (ICC) including your PKI certificates.

The latest JRE is downloadable from Sun at <http://www.oracle.com/technetwork/java/javase/downloads/index.html> (External Link)

Follow the on screen instructions after download to install the JRE.

[Return to the TOP of the page.](#)

Close

The Machine Setup instructions are updated with the Java Runtime Environment Installation instructions. Step 5 will detect the latest version of the Java Runtime Environment the user has installed and display it. If the User has 1.7.0.01 or higher installed, then Step 5 can be ignored.

Message from webpage

WAWF requires 32-bit JRE (Java Runtime Environment) version 1.6.0_10 or above for 32-bit browsers. Do you wish to install the latest 32-bit JRE?

When a current Common Access Card (CAC) or Digital Certificate User clicks the "Certificate Login" button and the User does not have JRE1.6.0_10 or above installed, then they will be prompted to install it.

Note. This occurs for IE7+ (32-bit version).

Wide Area Workflow!

Click on one of the links from the menu above.

WARNING!

Do not use a word processor program (e.g., Microsoft Word, Microsoft WordPad, Microsoft Write, etc.) to create FTP files, EDI files, or to cut-and-paste text field data into the word processor program and pasted into Microsoft Notepad, or another ASCII text editor and saved in the text editor. This process will strip out control characters that contain formatting information.

Be careful when completing electronic forms.

Work within the WAWF application.

Work with the various information categories, e.g., Document Header, Addresses, Comments, Line Items,

Cursor over the "Acceptor" menu dropdown, and click on the "Acceptance Folder" link.
